Extender for BPCS & ERP_{LX}

Cloud Computing for BPCS & ERP_{LX} Applications

Data is the lifeblood of any business. Getting the right data into the right people's hands can help you save money, connect with your partners and offer better service to your customers. Cloud computing promises instant worldwide access to data, but your company has large investments in existing legacy systems that are not cloud-friendly. Is it even possible to get the benefits of cloud computing using your existing systems without making a major shift in software strategy?

With Catavolt Extender for BPCS & ERP_{LX} the answer is yes. Catavolt Extender is a secure, high-performance cloud computing environment you can use to build your own corporate cloud. Your corporate cloud connects you to your users, partners, suppliers and customers, providing them instance access to your data while leveraging your existing software investment. You get the benefits of cloud computing without having to change your system or give up control of your data.

Here are some examples of what our customers are doing today with their own corporate clouds:

Connect with customers: Allow your customers to instantly check the status of orders, place new orders, and track shipments. They can even browse your catalog and place an order directly from their smart phone.

Remote Sites: Connect with employees at remote sites with a fast and reliable user interface for managing inventory, processing shipments, checking demand, and much more. All without Citrix and VPN

Pinpoint Monitoring: Give desktop widgets to your users that keeps track of important company events such as new sales, customer incidents, scrap on the shop floor and much more

Catavolt Extender for BPCS & ERP_{LX} is a hosted service that connects to your data without any changes to your existing system. In less than a day you can start building your own corporate cloud with no programming - just point and share. The solutions you produce are 100% customized to meet your specific business needs. Best of all, everything you create in Extender is fully backed by Catavolt support.

To begin deploying your data to the cloud, you simply point Extender to the data that you want to share and then tell Extender how you want to show it. Extender provides a rich browser experience, including lists, calendars, and interactive graphs. You can easily configure your data for alternate user interfaces such as mobile phones and desktop widgets. You can also allow users to attach their own documents, pictures, and other items to the data objects you show. Best of all, this can all be done with zero programming - you simply select the data you want to share using Extender's user interface. Extender does the rest by detecting the device the user is connecting from, giving them a user experience specifically tailored to their device.

- Hosted service
- Share data without programming
- Catavolt Extender manages devices, connections and encryption
- Users get the best possible experience for their device

Secure from Anywhere

With Catavolt Extender for BPCS & ERP_{LX}, your data stays secure. Your critical data remains in your data center where it has always been. Data that you share is never replicated or stored in the cloud. Users connecting to Catavolt Extender do not have access to your internal system -- they can only see data you allow them to see. Plus, the data they can see is encrypted end-to-end from your data center to their device. Our security is preferred by military contractors, aerospace firms, and large public companies.

- Maintain control of your data
- Share only the data you want
- Users do not have direct access to your system
- Military contractors, aerospace firms and large public companies use Catavolt Extender today

Desktop Widgets

You likely use some kind of widget or gadget today to keep track of the weather, stock quotes, or current news. Catavolt Extender for BPCS & ERP_{LX} can automatically take your data and create widgets that can be used to seamlessly connect with your users. Easy to use and very targeted, these widgets enable users to monitor important events and perform routine tasks with ease. You can take gadgets created by Extender and give them to your internal users, suppliers, or even customers.

- Pinpoint monitoring of important events
- Very convenient and easy to use
- Can be given to suppliers, partners, and customers

The screenshot shows a Windows desktop environment. In the top right corner, there is a clock widget showing the time as 1:50. Below the clock is a stock ticker widget displaying the following data:

Dow Jones Industrial Average Index	+38.56
NYSE	11,274.94
NASDAQ Composite Index	+14.49
NYSE	2,291.01
S&P 500 INDEX	+4.96
NYSE	1,125.42

Below the stock ticker is a weather widget for Phoenix, AZ, showing a temperature of 99° and a forecast of Mostly Sunny with a high of 107° and a low of 87°. The main widget is the 'ABC Tech Quick Order' window, which is divided into two sections:

Previously Ordered Items

Part Number	Part Description	Times Ordered
1000	PC, 186 Mhz, Desktop	20
1001	PC, 200 Mhz, Desktop	20
2000	Monitor, 14" VGA	20
2001	Monitor, 15" VGA	20
1002	PC, 266 Mhz, Desktop	19
3000	Drive, 2.1GB	19

Currently On Order

Type	Order	Item	Description	Ordered	Shipped	Backordered	Price	Tot.
Quote	QT 800013	3000	DRIVE, 2.1GB	5	0	0	139.99	69
Quote	QT 800014	1000	2.93 GHz Dual Core	14	0	0	126.237	1,767
Quote	QT 800015	3000	ROYAL COALS	3	0	0	4.25	12.75
Quote	QT 800016	2001	MONITOR, 15" VGA	6	0	0	179	1,074
Customer Order	PO_10306	1000	PC, 166 Mhz, DESKTOP	77	0	0	948.853	72,972.68

The desktop taskbar at the bottom shows the following open applications: Adobe - Adobe AIR, Citrix Desktop - Citri..., ABC Tech Quick Or..., and Untitled - Paint. The system tray shows the time as 2:36 PM on Wednesday, 8/4/2010.

The Catavolt Quick Order widget running alongside other common widgets such as Stock Ticker, Current Weather, and Clock. A customer can use this widget to keep track of their current orders and place new orders, right from their desktop.

Business Graphs

Your data can tell an important story, but it is not always easy to present tabular data in a single window to help make informed business decisions. With Catavolt Extender for BPCS & ERP_{LX}, you can easily collect and show your data in a graphical format. Business graphs created in Catavolt Extender are fully interactive. Users can filter graph data by category. They can drill down from a grouping graph all the way to the individual transactions that make up the graph data. They can even perform actions directly against the data in a graph.

- Easy to create and share
- Intuitive and interactive
- Drill down to any level of detail
- Can be deployed on widgets

Back end transactional data can be grouped, summarized and filtered to produce interactive graphs with drill down capabilities.

Calendars

Most companies deal with business data that revolves around dates and times, such as shipments, dock schedules, employee work shifts, etc. Instead of viewing this data in a table, Catavolt Extender allows you to display date-centric data in an interactive calendar format. Calendars created in Catavolt Extender allow users to drill into individual items so that they can view and change information about the item directly from the calendar. They can also drag and drop these items to quickly change dates and times.

Showing data in calendar format makes the application more intuitive. Calendars support dragging and dropping events and drilling down into event details.

Mobile Applications

How much more could your company achieve if you could connect with your users on the go? Your sales reps could review a customer's account while on location at the customer site. Your managers could approve orders while at lunch. Your plant manager could keep track of schedules while on the shop floor. Unfortunately, putting business data on a mobile device is not easy, and the myriad of mobile devices available on the market do not make things any easier. Some of your users have iPhones, others swear by their BlackBerries, and the president just got the new Droid. With Catavolt Extender for BPCS & ERP_{LX}, you

simply choose the data your users should see and we do the rest. We present the best possible user experience for a wide range of devices including BlackBerry, iPhone, Droid, and even the iPad.

- Catavolt Extender for BPCS & ERP_{LX} manages individual mobile devices for you
- Supports BlackBerry, Windows Mobile, iPhones, iPads, Droids, and others
- All you do is choose the data users will see

Two users use their phones to review and approve purchase orders. One has an iPhone and the other a BlackBerry. Each gets the best possible user experience for their device.

Business to Business

Catavolt Extender for BPCS & ERP_{LX} lets you seamlessly connect with your users. This includes partners, suppliers, and customers. You can reduce costs and increase sales by making it easier and more convenient to do business with your company. Using Catavolt Extender, you can give your external users access to data they need without opening your system to the world. Users access your data through the Internet without ever having direct access to your internal system.

- Seamlessly connect with your customers, suppliers and partners
- Share only the data they need to see
- Make doing business with your company easier and more convenient
